

# MDI PACS

Management and storage of DICOM medical images

Mobile Digital Imaging has customized its MDI PACS to not only archive, but also auto-route and QA all patient studies to guarantee fast and accurate workflow.

Web-based and available from anywhere and on any device, MDI PACS is the framework for a streamlined and efficiently productive workflow, all for an affordable price. And, backed by 24/7/365 tech support, our PACS ensures you're always up and running.

Ideal for many medical facilities, including:

- **Medical Imaging Centers**
- **Radiology Groups**
- **Urgent Cares**
- **Portable Imaging Providers**

## FEATURES & BENEFITS

### NO PER STUDY COSTS

Unlike many other PACS programs, MDI PACS does not charge per study. Ideal for higher-volume companies, this unlimited study pricing allows for your company to continue growing without the concern of outgrowing your PACS system and facing additional charges.

### UNLIMITED IMAGE ARCHIVING

MDI PACS comes with unlimited image archiving. There are no software restrictions on the number of studies or images you can store within the system. So, no matter your study count - you know you're covered.

### AUTO-ROUTE TO MULTIPLE DESTINATIONS

Images can be auto-routed to multiple destinations using rules-based auto-routing which saves time, reduces errors, and eliminates the need for a middleman to push studies through.

### RECEIVE IMAGES FROM ALL DICOM SOURCES

Our system is able to receive images from all DICOM sources. So no matter which medical imaging services your company provides (EKG, Mammo, Echo, etc.), you can be sure they're all processed, routed, and archived properly within the system.

### INCLUDES DICOM MODALITY WORKLIST

MDI PACS includes DICOM modality worklist. Have all the original order information available to any authorized modality, thus eliminating duplicated details and avoiding inaccuracies caused by missing information.

### ADDITIONAL FEATURES

PACS can be purchased with or without hardware – meaning you don't need any other MDI products for this stand-alone system to work. Our software can also auto-generate email reports of daily, weekly, or monthly activity and has built-in email notification to alert adminsof any "events".
