

MDI BRIDGE

Full-featured DICOM gateway to maximize workflow

To accommodate our customers in remote areas with low internet bandwidth signals, we originally developed our MDI Bridge software. This software improved transmission of digital images up to 3-5x faster when using a wireless air card or signal. We then enhanced this into gateway software for companies looking to offer their clients a secure way to transmit their DICOM studies from any modality to their PACS or Teleradiology Webserver.

FEATURES & BENEFITS

- Includes Sending & Encryption
- Has multiple transmission protocols & compression
- CD/DVD Burning capabilities
- Option to attach final reports to images
- Query and Store DICOM Modality Worklist entries and allow your modality to retrieve the information without internet
- Built-in viewer lets you review the DICOM images before you send
- DICOM Tag Viewer and Editor
- Install on any Windows PC or Laptop
- Send images to multiple locations at the same time with its auto-routing feature
- Keeps a detailed record of all studies sent and will archive multiple patient studies to CD/DVD
- 12-month warranty with 24/7/365 phone support and installation is included
